

**HI-TEC SPRAY give Custom Wytelyne  
a real coating and remain friends.**

Kent-based surface coatings technology specialist, Hi-Tec Spray Ltd. have recently delivered another installation of ITW Gema's award winning Optiflex Powder Coating System to the specialist trade coater of steel and aluminium, Custom Wytelyne Ltd.

Custom Wytelyne's industry applications vary from shop fittings to parking meters, street furniture to hotel and office furniture and from aerospace to public service vehicle components. Each specification is distinctly individual and all demand nothing less than a quality finished, end product or component.

From the many competitor systems available HiTec Spray's Optiflex Powder Coating System met their brief in full. It is easy to use, easy to clean and easily dismantled. The performance characteristics are excellent and, with two, small, front-mounted wheels and two larger rear wheels the manoeuvrability is as simple as wheeling a baby's pushchair. The final gloss was the saving on powder scrap which was sufficient to self-finance the purchase within eight months.

The user-friendly but sophisticated Optiflex power management system has been the key to their success. This system offers up to 20 coating programs and 3 preset standard programs - normal, deep cavity and overspray, which can be achieved cold and so eliminate oven costs. The Optistart control unit ensures a uniform, powder transport capability enabling precision application with reproducible results for solid or metallic finishes and no re-visits. With the operator in mind, the ergonomically designed, lightweight and perfectly balanced gun gives comfort, speed and efficiency with less operator fatigue. The easy-clean characteristics and quick colour-change facility are yet more features that set this powder coating system apart from its competitors - without any loss of product integrity.

Hi-Tec Spray Ltd. supply more than applications equipment and plant in isolation. They also develop a partnership with their clients to design and develop turnkey systems, where, on the one hand – individual components work well independently, and on the other – collectively fit together like a glove. They are probably the only company able to pull both sides of the industry together to deliver that total professional solution.
