

HI-TEC SPRAY ASSURE KOMFORT WORKSPACE ARE WELL PRIMED

Komfort Workspace PLC design and manufacture a sophisticated range of workspace products for the office, healthcare and education marketplaces. Every interior is unique and has a direct impact on individuals' work environment and the business - with function, effectiveness and appearance high on the agenda.

They maintain continuous investment in the latest manufacturing technology to underpin their position and reputation in the market. To this end they turned to Maidstone based, surface coatings specialists, Hi-Tec Spray Ltd. (HSL), to design, supply and commission a new spray booth system for the priming of timber frames, doors, panels and other associated timber products that are synonymous with quality and style. It is a dedicated system and is in addition to two existing spray plants at the facility.

The system comprises a 6m-wide dry-filter, spray booth split into two, 3m-wide booths, each 2250mm high and 1200mm deep. This affords greater flexibility and economy when employing either both simultaneously for large capacity projects or just one booth for priming small-run parts.

In design, HSL successfully overcame significant difficulties when fitting the ductwork due to space limitation and existing equipment installations restricting the ducting route outside the building.

Filtered, forced air replacement is managed by two input units balanced with the extraction to provide a clean environment to produce a top quality finish.

Hi-Tec Spray Ltd. supply more than application equipment and plant in isolation. They also develop a partnership with their clients to design and develop turnkey systems, where, on the one hand – individual components work well independently, and on the other – collectively fit together like a glove. They are one of few companies able to pull both sides of the industry together to deliver that total, professional solution.
