

HiTec Spray increase the pressure with Graco's new MERKUR range.

Hi-Tec Spray (HSL) are pleased to announce the brand new range of Graco MERKUR pumps with an expanded choice of 'air displacement volumes to fluid operating pressure' ratios (from 10:1 thru to 48:1).

The pumps are available as standard units or as more sophisticated DataTrak™ models offering significant benefits that include pump diagnostics for maintenance, air and material flow information, and automatic shutdown facility when dry to avoid unnecessary wear on the unit. All models are available as Wall Mount, 2-Wheel Cart Mount and Stand Mount units.

With variable litre throughput at the right pressures to suit particular applications the contractual joiners and furniture makers should benefit immensely from this technology upgrade.

The new range of pumps also employs the more sophisticated Air Mix technology rather than air spray, which provides greater transfer efficiency with less waste and an outstanding finish. It is also available in an airless spray version.

Graco's MERKUR pump is suitable for single component application whether the material be water based or solvent based. Utilising low pulsation with high output fluid delivery, the air-assisted, airless spray technology employed assures excellent finish quality with high material transfer efficiency and fast production rates.

With minimal service downtime and greater efficiency, quick pay-back and early profitability are benefits too good to ignore in today's economic climate.

Hi-Tec Spray Ltd supply more than application equipment and plant in isolation. They also develop a partnership with their clients to design and develop turnkey systems, where, on the one hand – individual components work well independently, and on the other – collectively fit together like a glove. They are one of few companies able to pull both sides of the industry together to deliver that total, professional solution.
