

HiTec Spray help Ridon Joinery expand their manufacturing portfolio.

The 30-year established family business of Ridon Joinery has carved a reputation for supplying fine joinery to the building industry and private clients alike. Bringing quality joinery projects to the stage of being ready for finishing has long been their mantra. While the excellent relationship with their finishing subcontractors has served them well, basic economics and a close control of end-of-line manufacture has steered them to expanding the business to encompass an in-house finishing process.

It has been a major crossroad in their growth and getting it right was critical, to which end they recruited the surface coatings specialists, Hi-Tec Spray Ltd. – Southampton depot – to design build and commission a Dry Filter Spray Booth and supply a GRACO Merkur application system.

The spray booth, measures 4000mm wide x 2250mm high x 1000 mm working depth is manufactured from first quality, galvanised steel sheet panels, folded into shallow tray sections for maximum strength and supported with rolled steel and/or prefabricated sections where necessary.

It has a 1000mm deep working canopy area which is fitted with a fluorescent lighting unit safely housed behind Georgian wired glass.

The heavy duty centrifugal fan housed in the extract tower at the rear of the plant extracts at a rate of 6.m³ /s.

The Applicator system comprises the Graco MERKUR, air operated 30:1 ratio pump, the latest G40 aircoat spray gun with a host of accessories to include a 411 aircoat, flat spray tip and a set of tip broaches.

The contract adds testimony to Hi-Tec Spray Ltd. supplying more than application equipment and plant in isolation. They develop a partnership with their clients to design and develop turnkey systems, where, on the one hand – individual components work well independently, and on the other – collectively fit together like a glove. They are one of few companies able to pull both sides of the industry together to deliver that total, professional solution.
